Clean & Green Organics Pty Ltd  
Grower's Gold Organics

# Composting

Striving to create a circular economy through best practice organic composting.

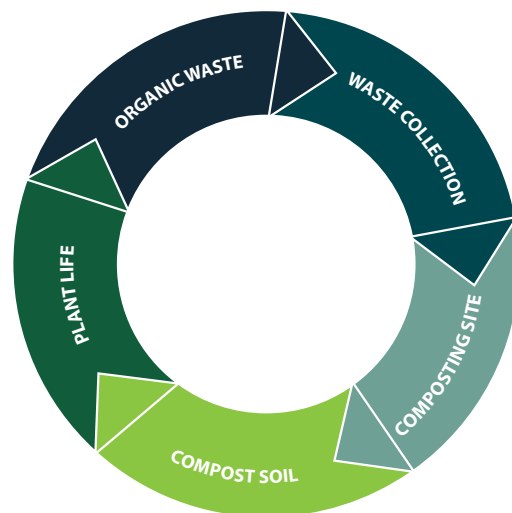

Clean & Green Organics adopt the latest technologies and research in all composting processes.

Using only organic materials, Clean & Green Organics are driven to repurposing food and green waste, otherwise sent to landfill, into revitalised nutritional composts & soils, essential for healthy gardens and livestock productivity.

Created from composted organics, Grower's Gold compost and soil products revitalise tired soils with a boost of nutrients and micro-organisms essential for healthy growth and improved soil quality.

All Grower's Gold composts & soils can be used in the garden all year round.

Grower's Gold product line: Soil Conditioner, Garden Mix, Organic Top Dressing & Compost Soil, have unique benefits & features tailored to your varying gardening needs.

## The Process

All products are initially composted over a 12-19 week period before undergoing its specialised processes for each product's final output.

Composts are screened at 8 -15mm to maximise nutrient absorption. The commercial composting process cooks & kills off pathogens, weeds and other nasties from the compost, leaving only a high-quality, mineral-rich & micro-organism filled product behind!

# Soil & Compost Overview

## Nutrient Content

All composts & soils are high quality, nutrient-rich organic products.

Organic minerals like Nitrogen & Phosphorus offer essential soil nutrients compared to generic fertilisers, and in the long term are more beneficial for your gardening needs and can save you unnecessary extra spending costs.

## Soil pH Balance

All composts & soils balance any pH fluctuations in your garden, which in equilibrium enables optimal nutrient absorption and plant health.

All our composts are externally tested by Independent Soil Testers to conform to Australian Standards AS4454.

## Soil Health

All Clean & Green composts and soils improve overall garden soil health. Due to the high organic matter in the product, garden soils receive the essential nutrients and minerals necessary for healthy growth.

All products increase soil fertility essential for seed germination and garden growth.

## Water Absorption

All compost and soils have the capability to retain more water than other fertiliser products, enabling for excellent drainage and water storage.

This helps increase nutrient absorption and reduces the risk of plant stress due to dryness, waterlogging or malnutrition. This saves water usage, time & cost!

## Water Drainage

All Clean & Green composts & soils have excellent water drainage capabilities.

The organic matter in our product encourages garden worms to create drainage channels in the soil, preventing soils from waterlogging or becoming anaerobic. It also enables soil aeration and prevents the soil becoming compact or dry.

## Safe & Good

All composts & soils are completely safe and user-friendly!

Made from only organic materials & therefore free from any harmful toxins or chemicals. Safe for kids and pets! Also safe for the environment and our waterways.

Composts & soils are odourless (only smells like dirt).

## Typical Analysis

PARTICLE GRADING SIZE	SOIL CONDITIONER
ORGANIC MATTER	20 - 40
MOISTURE	34 - 40
pH	6.5 - 7.5
BULK DENSITY	0.4 - 0.7
NITROGEN DRAWDOWN	0.7 - 0.8
PLANT GROWTH TEST	92
PHOSPHORUS	0.08 - 0.15

materials

## Aussie Made

Clean & Green Organics & Grower's Gold are proudly Australian owned and operated companies. All Grower's Gold composts & soils are made in Australia from 100% organic recycled materials.

The Clean & Green Organics & Grower's Gold teams are passionate about supporting local Australian businesses and communities, and strive to create a circular economy!

# Soil & Compost Products

## Soil Conditioner:

Created using thermophilic composting processes and rich in minerals and micro-organisms. Soil conditioners aerate & condition soils, increase soil fertility & improve soil structures.

### Features:

- High fertile organic matter
- Soil structure health
- Soil pH balancer
- Odourless

## Garden Mix:

Clean & Green Garden Mix is bursting with essential nutrients necessary for healthy plant, fruit & vegetable growth. An all-purpose soil! Perfect for garden beds, potting mixes & planting needs!

### Features:

- Sand & composted organics
- Well-draining soil
- All-purpose gardening
- Odourless

## Organic Top Dressing:

Finer blend which adds high-quality organic material to your soil and gardens to balance nutrient levels and improve the overall soil structure. Perfect for lawns, top dressing & parklands.

### Features:

- High fertile organic matter
- Soil pH balancer
- Protects from wear & tear
- Odourless

## Compost Blend:

Clean & Green composts are rich in minerals & micro-organisms essential for stimulating healthy & nutrient-rich fruit & vegetable growth and strong root development.

### Features:

- High moisture content
- High fertile organic matter
- Soil pH balancer
- Odourless
